Symantec Unveils New Netbackup And Backup Exec Enterprise Storage Software

KUALA LUMPUR, March 1 (Bernama) -- Symantec Malaysia, a global leader in providing security, storage and systems management solutions, today announced two new products, NetBackup 7.5 and Backup Exec 2012, to deliver a new approach for modernising backup and recovery.

Its business partners, Mesiniaga Bhd, Infowhiz Solutions (M) Sdn Bhd, CHASSAsia (M) Sdn Bhd and other local business partners, join hands together to help small and mid-sized businesses (SMBs) and large enterprise organisations overcome their data protection challenges.

"While information volumes are skyrocketing, the IT budgets of many organisations in Malaysia are not keeping pace.

"Organisations are under pressure to protect more information with fewer resources, while meeting tighter service-level agreements (SLAs)," Alex Ong, senior country manager, Symantec Malaysia, said Thursday.

"Symantec unveils a radical new plan to modernise data protection that will drive out 80 per cent of the operating costs associated with backup over the next five years," Ong added.
